

Management & Business Support

Delivering best value solutions to boost productivity and enhance your strategic goals

Best Value Technology, Inc. (BVTI) has often been called “a small business that plays above its weight class”. Over the past 12 years, BVTI has earned a solid reputation as a Service-Disabled Veteran-Owned Business (SDVOB) who delivers quality solutions for management and business support for federal agencies such as the Department of Homeland Security, Veterans Affairs, Federal Aviation Administration, The National Security Agency and the Department of Defense. BVTI manages twenty prime contracts, working closely with a variety of multi-dimensional partners to deliver seamless solutions to clients.

Federal agencies are complex organizations that face many challenges in a volatile political and budgetary environment. Key to success is a solid infrastructure of management and business support that streamlines daily operations and enables busy executives to concentrate on their core agency mission. BVTI support solutions are designed to fit the unique requirements of a client’s environment, incorporating recognized subject matter expertise, proven management processes and innovative approaches to ensure a solid alignment to an agency’s strategic vision.

Program and Project Management - Our approach incorporates agile best practices that coordinate closely with end-users to define requirements, short and long term program goals, strategic and operational plans, performance-based implementation, proactive communications, and effective measurement for continuous quality improvement.

Strategic planning - We help unify governance by establishing strong strategic direction and integrated operating models to improve efficiency, collaboration and credibility. Services include analyzing program directions, mapping enterprise-level strategic milestones, developing timelines, and aligning program- and branch-level plans with operational plans and goals.

Performance Measurement - Our experts develop and refine strategic measures that link goals to program objectives, calculate program performance metrics, and prepare performance plans in compliance with Government requirements. We use a variety of techniques tailored for individual programs.

Business Process Reengineering - Our expertise and tools help enable a sustainable operating environment that maximizes personnel, programs, and resources. We use Lean Six Sigma methodology, DevOps and continuous delivery mechanisms, modeling and simulation, and business process reengineering to document existing processes, assess gaps, identify inefficiencies, and define future states.

Financial Management - BVTI provides a full lifecycle of financial services, including program budgeting, acquisition policy and pricing, operational oversight, invoicing and payments, and contract close-out.

Change Management - We support transition of administration, programs, reorganization and change. We work with end-users and stakeholders to develop targeted plans, identify scope, assess impact on the baseline process, evaluate options, recommend alternatives, and review recommendations.

Quality Control - We develop quality management plans and programs, conduct inspection and monitoring to identify quality issues, quantify adherence to QM requirements, and initiate corrective action. Our QM framework helps products and services meet and exceed quality requirements.

Training - We offer a continuum of training resources, including Courseware Development, Web Based Training (WBT), Computer Based Training (CBT), Skill Certification, LIVE training, “train the trainer,” and evaluation.
